

Hill and Moor PC Tree Survey Report

Nick Bolton of Tree Frontiers carried out a survey. The reports are attached and should be included within the minutes and a record of these kept. In summary the trees all appear to be in good condition. The trees indicated in the report have been marked as low risk and should be monitored. The recommendation is for a further report in 28 months. That would be December 2028. I recommend the lengthsman keeps an eye on the trees and reports any issues in the mean time. In terms of planting new trees, if the PC is so advised, Nick Bolton suggested we plant trees that future proof against climate change. This can be explored at a later date. He also suggested that to increase biodiversity, hedge planting is a better approach.
